

Display Modes (Non-Interactive)

Control how details blocks appear in PDF, Word, and other non-interactive formats.

Display Modes

Set the `display` attribute to control content visibility within non-interactive formats using one of the following modes:

Mode	Description
"show"	Display full content in a callout (default)
"placeholder"	Show callout with placeholder text
"remove"	Remove the block entirely

Global Configuration

Set the default display mode for all non-interactive formats either in document metadata or `_quarto.yml`.

For example, to set the default to placeholder mode in the Quarto document:

```
---
extensions:
  details:
    non-interactive:
      display: "placeholder"
      non-interactive-summary: "Details"
      placeholder-text: "Interactive content not available."
      callout-type: "note"
---
```

Per-Element Configuration

Override the global setting for individual details blocks using the `display` attribute inside the details Div.

Show Mode (Default)

The show mode displays the full content of a details Div inside a callout block. That is, the content is fully visible in non-interactive formats.

```
::: {.details summary="Full Content" display="show"}
This content appears in full.
:::
```

Gives:

i Full Content

This content appears in full in non-interactive formats as a callout block.

Placeholder Mode

For non-interactive formats, we can show a callout with placeholder text instead of the full content.

```
::: {.details summary="Interactive Widget" display="placeholder" placeholder-
text="See online version for interactive demo."}
<iframe src="demo.html"></iframe>
:::
```

This gives:

i Interactive Widget

See the online version for this interactive demo.

Remove Mode

Under this mode, the entire details block is omitted from non-interactive outputs.

```
::: {.details summary="HTML Only" display="remove"}
This disappears in PDF/Word.
:::
```

Gives:

(This block will not appear in non-interactive formats.)

Alternative Summary Text

Specify different summary text for non-interactive formats using `non-interactive-summary` attribute:

```
::: {.details summary="Click to expand" non-interactive-summary="Additional
Information"}
```

Content here.
:::

Gives:

i Additional Information

Content here.

Callout Types

The callout type for non-interactive formats can be customized using the `callout-type` attribute. For example, with `tip` and `warning` types:

```
::: {.details summary="Tip" callout-type="tip"}  
:::  
  
::: {.details summary="Warning" callout-type="warning"}  
:::
```

Available types: `note`, `tip`, `warning`, `caution`, and `important`.
