Support This Demo

This document demonstrates the `support-this` Quarto extension with multiple funding platforms configured directly in the document's YAML front matter.

Configuration

We have specified the following configuration:

```yaml
extensions:
  support-this:
    display: badge
    heading: "Support My Work"
    description: "If you find this helpful, consider supporting me!"
    platforms:
      github: coatless
      patreon: username
      buy_me_a_coffee: username
filters: [support-this]
```

Make sure to replace `coatless` and `username` with your actual usernames on the respective platforms.

Supported Formats

This page is also rendered to PDF, Typst, and Word; use the links under "Other Formats" to compare them.

- **HTML** shows the styled section below, here with `display: badge`.
- **PDF, Typst, and Word** show the section as a note callout titled with the `heading`. Badges are HTML only, so these formats use the default icon, platform, and username display. Typst and Word show the platforms' icons, and PDF leaves them out, since LaTeX's default fonts can't display them.
- **RevealJS** adds the section as a slide of its own; see RevealJS Integration.

Support My Work

If you find this helpful, consider supporting me!

- **Buy Me a Coffee:** username
- **GitHub Sponsors:** coatless
- **Patreon:** username
